Christian Bjerre-Fernandes

Washington, DC

chrispooof | christian-bjerre-fernandes | chrispooof

Senior Software Engineer with 5+ years of experience across **Costar Group**, **Capital One,** and startup environments. Expert in **Full-Stack Development and Cloud Architecture (AWS Solutions Architect Certified)**. Proven track record of delivering enterprise-scale optimizations, including an **85% reduction in operational costs** of our ETL process. Experienced with creating UI/UX components and user flows using TypeScript and React and integrating those features with backend services and APIs. Specialized in building scalable AWS-native full-stack applications and high-performance data pipelines.

Work Experience

CoStar Group, Software Engineer II **July 2026 - Present**

Costar Suite | **Full-Stack Engineer**

- Built an **AI-powered Figma-to-code validation workflow** of Claude Code skills that generate components from Figma, compare computed CSS and Storybook screenshots against designs, and auto-fix mismatches in a **human-in-the-loop feedback cycle**, accelerating development of features and confidence in AI output.
- Integrated **multi-tenant support** and security for new lease portfolio management micro front-end.
- **Set up the MSSQL backend DB** and integrated with **CoStar Sync**, a near-real-time ETL platform, to subscribe to source database changes and build application-facing models powering a user-entered comps feature.
- **Supported the front-end modernization effort** by migrating components into the shared CoStar Suite component libraries, rewriting styling into Tailwind, and updating the micro-frontends to consume the shared package.
- **Created UI components/form** and integrated with our backend for a feature surrounding lease portfolio management.

Tech Stack: *TypeScript, React, C#, MSSQL, ETL, Snowflake, AWS, Docker, Terraform, Redis, Claude Code*

Capital One, Senior Associate Software Engineer **July 2023 - May 2026**

Slingshot | **Full-Stack Engineer**

- Delivered **end-to-end development** of a Change History UI feature exposing Databricks object lineage, enabling customers to correlate cost fluctuations with resource configuration changes.
- **Created UI components/form** and integrated with our backend a Budget alerting feature for users who wanted to monitor their Snowflake usage, sending a notification via Slack, Email, etc. after filling a configuration page.
- Updated snowflake procedures used for monitoring customer usage cost to send the customer an alert.
- Redesigned ingestion pipelines to process incremental events, achieving an **85% reduction** in Databricks ETL **operational costs** and **55% faster job latency**.
- Engineered a configurable framework for Databricks ETL pipelines that captures quantitative metrics on data quality and integrity checks.
- **Led the transition** to a 4-Table Model Medallion architecture and spearheaded **performance testing to ensure enterprise-grade scalability** for all Slingshot Databricks UI features.
- Created technical design for transitioning from self-hosted ClickHouse instances to cloud managed ClickHouse including data migration, network proxy fixes, and not disrupting existing data pipelines.
- Created performance benchmark tests for ClickHouse with queries representative of what would be powering our UI

Tech Stack: *TypeScript, React, Python, Databricks, Snowflake, ClickHouse, AWS, Java, Docker, Fastify, Jenkins, Claude Code, Windsurf*

Workforce Management | **Full-Stack Engineer**

- Contributed to a machine-learning platform optimizing customer service workforce scheduling, projected to save Capital One **tens of millions of dollars annually**.

Christian Bjerre-Fernandes

Washington, DC

chrispooof | christian-bjerre-fernandes | chrispooof

- Contributed to the development of a capacity-planning algorithm, forecasting agent demand across 6-week to 18-month planning horizons.
- Designed and reiterated the landing-page and form components of the workforce management UI, while doing **side-by-side testing** with customer service agents.
- Created technical design documentation of APIs and infrastructure to use **when leading a team of contractors** for the deployment of backend infrastructure and APIs supporting capacity-planning algorithm execution.

Tech Stack: *TypeScript, Vue, Python, RDS, PostgreSQL, ClickHouse, AWS, Fastify, Jenkins, New Relic, Figma*

Capital One, Associate Software Engineer **August 2021 - July 2023**

- Developed internal security and observability systems used by engineering teams to **monitor infrastructure activity and vulnerabilities**.
- Built an audit trail system tracking dataset activity across AWS services and created automated remediation templates for Docker container vulnerabilities for **300+ data scientists** across the organization.
- Built an automated pipeline from Snowflake to Elasticsearch, enabling Kibana dashboards for executive-level security reporting.

Tech Stack: *Python, Elasticsearch, Kibana, AWS, Lambdas, Jenkins*

Doce: Local Gifting, Founding Engineer **February 2023 - December 2025**

- Designed and built the core platform for a start-up, app-based marketplace enabling users to send gifts from local businesses.
- Collaborated with a team of 3 in a fast-paced environment **to support hundreds of users**.
- Developed numerous UI components and in-app user experience flows of the primary mobile application using React Native and Expo, delivering a **high-performance, cross-platform user experience**.
- Architected and deployed **scalable cloud infrastructure** supporting application APIs, authentication, and persistent storage.
- Maintained up-to-date documentation, GitHub projects board, and decision log for operation and timeline changes decided by the team.

Tech Stack: *TypeScript, React, React Native, Expo/EAS, AWS (S3, Cognito, Lambda, DynamoDB, SMS)*

Education & Certifications

University of Chicago - Bachelor of Science (BS) in Computer Science **June 2021**

AWS Certified Solutions Architect - Associate **Issued February 2023**
